**DETAILED ACTION**

***Claim Rejections - 35 USC § 103***

Claims 1-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over McDaniel US Patent No. 6,676,655 in view of Tankovich et al. US Patent No. 6,162,211.

McDaniel discloses methods for treating skin disorders, the methods comprising the step of exposing the treatment area to a laser light generated by an Nd:YAG laser in the wavelength range of 1064 nm.

As to claims 4 and 5, he teaches treatment durations that are analogous to the recited treatment times.

However, as to claims 1, 8, and 9, although McDaniel discloses a treatment dose of between approximately 0.1 –100 J/cm<sup>2</sup>, the applicant's argue that the disclosed range is a typographical error and McDaniel does not teach a treatment dose of 20 J/cm<sup>2</sup> or higher. Tankovich teaches an alternative laser method and apparatus for treating skin conditions of a patient, wherein the treatment/irradiation energy has a fluence range of between 3 J/cm<sup>2</sup> to about 300 J/cm<sup>2</sup> (see col. 16, lines 8-12).

Therefore, at the time of the applicant's invention, it would have been obvious to one skilled in the art to modify McDaniel in view Tankovich et al. and irradiate to the tissue with a treatment light having a fluence of 20 J/cm<sup>2</sup> or greater. For example, if the desired treatment is a hair removal, such higher fluence range is sufficient to provide the treatment.
